

CYCLEAN™

Water Reuse System

Food processing requires lots of water. The Cycleclean water reuse system ensures that plants will use less. By filtering and treating wash water, the Cycleclean water reuse system helps processors reduce their costs without sacrificing food safety. The Cycleclean can be implemented in multiple locations, providing maximum flexibility and savings potential. Cycleclean conforms to the USDA-FSIS requirements for water reuse systems found in 9 CFR 416.2. With the MARC software, the Cycleclean can be monitored in real-time and reuse performance can be analyzed.

KEY BENEFITS

- ▶ Filter, treat, and reuse wash water
- ▶ Analyze usage trends
- ▶ Expand product margins
- ▶ Reduce water usage by thousands of gallons

ABOUT SAFE FOODS

Safe Foods Chemical Innovations is a division of PSSI Food Safety Solutions and offers superior chemical solutions, intervention processing aids, innovative equipment, and real-time analytics software to food processing partners around the world. Together with PSSI's contract sanitation services and pest prevention, they work cohesively to provide a unified, total protection approach to food safety, supporting more than 725 partner plants every day. PSSI's team of more than 16,500 skilled food sanitors, microbiologists, technical experts, engineers and safety specialists are committed to protecting people and brands by keeping USDA, FDA and CFIA processing facilities clean, safe and audit-ready. The PSSI team works hand-in-hand with every partner to develop customized, comprehensive programs for smarter and more efficient employee and food safety.
